Introduction

A subtitle

What is this?

A template for beamer presentations. I made this template following RPI's official powerpoint template and logos [1].

Why did I do this?

I couldn't find an existing one and I didn't want to copy over citations manually.

5 Some Notes

Table of Contents

- You already saw the table of contents.
- By default, it is in one column. If you want to divide it to multiple columns, you can use `minipage` or `columns` [2]
- To make use of this, you need to use sections, which should be placed outside of the frame [3].
- Use `AtBeginSection` to automatically show the table of contents at the beginning of each section.

- 5 Some Notes

Using lists

Simple example of using lists.

- Item 1.

- Item 2.

1. Enumerate 1

2. Enumerate 2

I think this looks pretty similar to how the powerpoint one looks.

Using figures

Here is an example of a figure.

Figure: A subfigure

Figure: Another subfigure

Figure: Example of a figure side by side.

5 Some Notes

Using a full screen image

Next slide shows how to use an image in full screen. I got this from [here](#)

A Table

Col 1	Col 2	Col 3
a	b	c
d	e	f

Table: An example table

Findings

- This is indeed a table.
- Use minipage to put two things side by side, just like the images.
- You can also use columns, but it's not necessary [4].

- 5 Some Notes

Textboxes

First Block

- First item of first block.
- Second item of first block.
- Notice that the next block matches the height of this one.
- I am also changing the indentation of bullets so it looks better in the boxes.

Second Block

- First item of second block.
 - first sub item of second block.

Third Block

This one doesn't have a list and doesn't match the height!

4 Using Bibtex

5 Some Notes

Using Bibtex

- It should be the same as using your regular bibtex.
- I will also refer to some resources [5]–[7] that helped me put this together.
- You can add `[allowframebreaks]` to the frame to automatically continue the reference list in the text page if you have too many.
- You can use `\tcite` shorthand to use it in *text* mode, i.e. Anglim [5].
- You can use `\fcite` to add a citation with a footnote on the bottom of the slide.
 - Note that if you are using `\columns` or `\minipage`, the footnote will by default appear in the bottom of the *environment*, not the slide.
 - You can manually escape this by using just `\cite` or `\tcite` and then adding a `\bcite` outside of these environments.
 - e.g. `\bfcite{fiandrinoAnswerDesignCustom2013}`.

4 Using Bibtex

5 Some Notes

Few notes

- I tried to use relative values for margins and header/sizes where I could. It should scale well with different page sizes.
- I compiled this project with xelatex. I do not know if this will compile well on overleaf since the free version has extreme timeouts now.
